81 Techniques for obtaining high performance in Java programs
Iffat H. Kazi, Howard H. Chen, Berdenia Stanley, David J. Lilja
September 2000 **ACM Computing Surveys (CSUR)**, Volume 32 Issue 3

Full text available: pdf(816.13 KB) Additional Information: full citation, abstrac

This survey describes research directions in techniques to improve the performance of programs written in the J extensive portability of programs. A Java interpreter dynamically executes Java bytecodes, which comprise the i improved through compilation, possibly at the expense of portabili ...

Keywords: Java, Java virtual machine, bytecode-to-source translators, direct compilers, dynamic compilation,

82 Cellular disco: resource management using virtual clusters on shared-memory multiprocessors
Kinshuk Govil, Dan Teodosiu, Yongqiang Huang, Mendel Rosenblum
August 2000 **ACM Transactions on Computer Systems (TOCS)**, Volume 18 Issue 3

Full text available: pdf(287.05 KB) Additional Information: full citation, abstrac

Despite the fact that large-scale shared-memory multiprocessors have been commercially available for several y and cost of making the required changes to the operating system. A recently proposed approach, called Disco, s operating system technology. In this paper we present a ...

Keywords: fault containment, resource managment, scalable multiprocessors, virtual machines

83 Binary translation and architecture convergence issues for IBM system/390
Michael Gschwind, Kemal Ebcioğlu, Erik Altman, Sumedh Sathaye
May 2000 **Proceedings of the 14th international conference on Supercomputing**

Full text available: pdf(1.44 MB) Additional Information: full citation, abstrac

We describe the design issues in an implementation of the ESA/390 architecture based on binary translation to a decomposed into instruction "primitives" which are then scheduled onto a wide-issue machine. The aim is to ach can be exploited by binary translation software ...

84 Practicing JUDO: Java under dynamic optimizations
Michał Cierniak, Guei-Yuan Lueh, James M. Stichnoth
May 2000 **ACM SIGPLAN Notices , Proceedings of the ACM SIGPLAN 2000 conference on Pr**

Full text available: pdf(190.06 KB) Additional Information: full citation, abstrac

A high-performance implementation of a Java Virtual Machine (JVM) consists of efficient implementation of Just- These components are tightly coupled to achieve high performance. In this paper, we present some static anddy Lab Virtual Machine (MRL VM), ...

85 Session summaries from the 17th symposium on operating systems principle (SOSP'99)
Jay Lepreau, Eric Eide
April 2000 **ACM SIGOPS Operating Systems Review**, Volume 34 Issue 2
Full text available: pdf(3.15 MB) Additional Information: full citation, index terms

86 System-level power optimization: techniques and tools
Luca Benini, Giovanni de Micheli
April 2000 **ACM Transactions on Design Automation of Electronic Systems (TODAES)**, Volume
Full text available: pdf(385.22 KB) Additional Information: full citation, abstrac

This tutorial surveys design methods for energy-efficient system-level design. We consider electronic sytems co consume energy, namely computation, communication, and storage units, and we review methods of reducing t energy-efficient software design and compilation. This survery ...

87 Overcoming the challenges to feedback-directed optimization (Keynote Talk)
Michael D. Smith
January 2000 **ACM SIGPLAN Notices , Proceedings of the ACM SIGPLAN workshop on Dynamic**
Full text available: pdf(1.33 MB) Additional Information: full citation, abstrac

Feedback-directed optimization (FDO) is a general term used to describe any technique that alters a program's affairs in FDO and discusses the challenges inhibiting further acceptance of these techniques. It also argues thai immutable executables and traditional static optimizations are ...

88 A code-motion pruning technique for global scheduling
Luiz C. V. Dos Santos, M. J. M. Heijligers, C. A. J. Van Eijk, J. Van Eijnhoven, J. A. G. Jess
January 2000 **ACM Transactions on Design Automation of Electronic Systems (TODAES)**, Volume
Full text available: pdf(293.27 KB) Additional Information: full citation, abstrac

In the high-level synthesis of ASICs or in the code generation for ASIPs, the presence of conditionals in the beh such a way that the search space is limited by the applied heuristics. For example, they might miss opportunitie method which allows generalized code motions. Schedu ...

Keywords: code generation, code motion, global scheduling, high-level synthesis, speculative execution

89 Cellular Disco: resource management using virtual clusters on shared-memory multiprocessors
Kinshuk Govil, Dan Teodosiu, Yongqiang Huang, Mendel Rosenblum
December 1999 **ACM SIGOPS Operating Systems Review , Proceedings of the seventeenth ACM s**
Full text available: pdf(1.93 MB) Additional Information: full citation, abstrac

Despite the fact that large-scale shared-memory multiprocessors have been commercially available for several and cost of making the required changes to the operating system. A recently proposed approach, called Disco, s operating system technology.In this paper we present a syste ...

90 Static scheduling algorithms for allocating directed task graphs to multiprocessors
Yu-Kwong Kwok, Ishfaq Ahmad
December 1999 **ACM Computing Surveys (CSUR)**, Volume 31 Issue 4

101 Space/time-efficient scheduling and execution of parallel irregular computations
Tao Yang, Cong Fu
November 1998 **ACM Transactions on Programming Languages and Systems (TOPLAS)**, Volume 20 I:
Full text available: pdf(374.95 KB) Additional Information: full citation, abstrac

In this article we investigate the trade-off between time and space efficiency in scheduling and executing paralle model irregular parallelism with mixed granularity, and we use direct remote memory access to support fast cor improve memory utilization while retaining good time efficiency, and we ...

Keywords: DAG scheduling, direct remote memory access, irregular parallelism, run-time support

102 Space-time scheduling of instruction-level parallelism on a raw machine
Walter Lee, Rajeev Barua, Matthew Frank, Devabhaktuni Srikrishna, Jonathan Babb, Vivek Sarkar, Saman Amaras
October 1998 **Proceedings of the eighth international conference on Architectural support for I**
Full text available: pdf(1.79 MB) Additional Information: full citation, abstrac

Increasing demand for both greater parallelism and faster clocks dictate that future generation architectures wil A Raw microprocessor distributes all of its resources, including instruction streams, register files, memory ports, Because communication in Raw machines is distributed, com ...

103 Automatic data layout for distributed-memory machines
Ken Kennedy, Ulrich Kremer
July 1998 **ACM Transactions on Programming Languages and Systems (TOPLAS)**, Volume 20 I:
Full text available: pdf(633.20 KB) Additional Information: full citation, abstrac

The goal of languages like Fortran D or High Performance Fortran (HPF) is to provide a simple yet efficient mach intellectual challenge in writing an efficient program in such languages. The performance of a data layout depen processors. This makes the choice of a good layout extremel ...

Keywords: high performance Fortran

104 Models and languages for parallel computation
David B. Skillicorn, Domenico Talia
June 1998 **ACM Computing Surveys (CSUR)**, Volume 30 Issue 2
